

MINFY ACCELERA

Accelera
Application Services

Enterprise transformation demands total alignment

Mobilization, modernization and innovation are the three stages we address for your business. We make it happen seamlessly and in a way that there is accuracy in both capacity and cost planning. You can access industry and vertical experts who together can deliver a vibrant, market facing and an outcome road map. Catalysing the DevOps philosophy and culture, powering quality builds and an always ready to release state are part of the Minfy promise for DevOps services. Enterprise transformation demands total alignment from a DevOps services provider. Try us and the goal post will get closer.

ACCELERA APPLICATION SERVICES

DevSecOps

8

- Transformation Services – One Touch Deployment
- Containerization as a Service
- Infrastructure as a Code
- Steady state support
- Platform – Ops/site Reliability Engineering

App Modernization

11

- Serverless
- Cloud Native Deployment
- Application Containerization
- Data warehouse on Cloud

Database Modernization

15

- DB Performance Tuning/Optimization (SSS- Model)
- DB Migration as a service
- DB Transformation Factory
- Data warehouse on Cloud

Questions we ask

- What is the current state?
- What technologies need to be adopted?
- What customisation is required?
- What are the targeted automation needs?
- What are the applications that need rapid on-boarding?
- How to keep the pipeline of development – integration – release running?
- How to create a robust and scalable platform to manage applications on a scale?
- What are the outcomes that need to be defined?
- How to reduce application costs along the way?
- How to keep pace with industry changes?

Areas we address

More work in less time

Collaboration

Experimental test environments

Faster service delivery

Metrics to track

Securing the cloud gateways

Benefits

Redefining automation

Scale creation

Limit high maintenance and physical IT footprints

MINFY ACCELERA – DEVSECOPS

Collaboration for Transformation

Meet the need for digital dexterity

The force of change, the need to be agile and the necessity of being flexible is what a business demands today. This dynamically drives the modernization of applications – and hence, their platforms, architecture and integration. A system made up of discrete component capabilities with well-defined interfaces delivers “digital dexterity,” which allows those components to change, operate, expand, evolve and be replaced independent of the rest of the system.

What Minfy can do for your business

- Define clear modernization goals and drivers
- Address application architecture and platform modernization together
- Establish self-service application delivery platforms to accelerate modernization
- Modernize application delivery before application technology:
- Apply product-centric application delivery practices
- Establish self-service application delivery platforms to accelerate modernization
- Put security at the center of your app development grow into you managing ‘security as code’.

Our transformation road map

DevSecOps Solutions

DevOps Transformation Services

Accelerate your release cycles and realize the greater business value through augmentation of fully-automated CI/CD deployment along with AI enabled systems in a single click for improved speed & quality decisions. Augment security best practices to leverage SAST & DAST tools to evolve from a culture of DevOps to DevSecOps.

Containerization as a Service

Evolve the future of your applications, transform from monolithic to containers or microservices architecture to save cost yet and scale your application performance, to accelerate your business

agility and deliver more applications with lesser dependencies.

Infrastructure as a Code

Automation is the key for DevOps transformations, when evolving from a project mindset to an SRE culture, churning out mutable infrastructure in a click of a button to improve resiliency & reduces the cost of failure through automatic rollbacks & DR invocation.

Site Reliability Engineering

Augment decision-making in DevOps by leveraging AI, which helps to scale the support with perspective & predictive analysis, triage and deduplicate alerts, Automate - "Measure- Interpret & Act

functions", Train AI - Models from human interventions and automate future RCAs.

Platform Ops Support

Strengthen your DevSecOps with PlatformOps Capability. It is the first step for your SRE culture, to evolve from a project mindset to a to product mindset - create a single Pane Control for your - ePaaS, fPaaS, VM Orchestration, Container Orchestration- Iaas & Caas.

DevSecOps Customers

MINFY ACCELERA

App Modernization

**Many advantages,
one Minfy**

Choose, plan, implement and modernize

Multiple advantages can come your way with app modernization. Speed of availability of the apps, ability for the app to be integrated with new and existing APIs. Re-platforming as per the emerging requirements and more. Basically what it means is that your legacy apps become agile and available for the team. However, crucial to this initiative in an enterprise is the cost and the accompanying complexity. How well can these efforts be optimised as a long term data center strategy, and how enabled are the teams to handle the complexity as the migration happens from legacy to cloud. With Minfy you can choose app modernization pathways that impact your business and the ongoing customer experience. It is about getting to know how to make the choices and implement them to a plan.

Constraints of Legacy Applications

Application Modernization Solutions

Serverless

You worry about those critical functions for your business while we worry about your servers and infrastructure. From enterprise applications and APIs the serverless approach can manage it all. It can automatically scale up or down depending upon the demand and the requests your app receives. We do this all by paying undiluted attention to security vulnerabilities and patching.

Cloud Native Deployment

Graduating from IAAS to PAAS is the road map for this Minfy deliverable. For it means that cloud native app development, production and delivery could happen on a platform basis. There could be a range emanating from cloud native development - devops, agile methodology, microservices, cloud platforms, containers such as Kubernetes and Docker, practically every new and modern method of application deployment can be deployed and used on a platform basis.

Application Containerization

We can deliver the wide ranging benefits of containerization – efficiencies in usage of CPU memory & storage, portability and reproducibility. What we keep a close eye on is the resulting security vulnerabilities and the actions that are needed to protect your IT artefacts.

Data warehouse

Well understood and a proven concept, Minfy minimises the recoding and disruptions. This is by virtue of our proprietary methodologies and accumulated experience in aiding businesses of different sizes and complexities. The Minfy advantage of cost optimisation goes without saying.

Application Modernization Services

- Applications Modernization and Transformation
- Custom Application Development - Server less
- Containerizing applications
- Containers Orchestration
- Dev-Sec-Ops as a Service

MINFY ACCELERA – DATABASE MODERNIZATION

**Agility, stability,
scalability and flexibility**

Bring elasticity to your data systems by deploying Minfy's various database modernization techniques. Your enterprise will experience the benefits stability, scalability, and flexibility. Moving to more robust platforms enable the agility. The results: changes can be quickly made to support business goals; organization can define a data strategy that aligns best to business and technological goals. Plus, enterprises benefit from increased productivity and reduced maintenance costs. Easier to run and with host of functionalities businesses can release staff to be deployed to more strategic efforts.

Database Modernization Solutions

DB Performance Tuning/Optimization (SSS- Model)

Careful planning in the initial steps of the database development cycle catalyses the performance. Ongoing tuning of Databases ensures the response times are reduced and there is better utilisation of the system resources. Minfy teams work to frameworks that identify the high performance areas over a wide variety of situations to arrive at the ideal configuration and working of your databases.

DB Migration as a service

Quick and secure migration of databases is what we promise at Minfy. Across a wide range of commercial and open source databases, we do it with virtually no downtime and ensure that all your operations are active and fully operational during the migration process.

DB Transformation Factory

A perfectly integrated data migration and integration service, the Factory ensures that data from a variety of sources is brought together in a seamless manner. And wherever possible the users have single pane into their data pipelines. Factoring in data silos, data volumes and complexity, the accompanying security and compliance issues, the Factory works as a well oiled approach to DB modernization and end to end handling.

Data warehouse on Cloud

When modernization is also about structured storage, analysis and reporting it demands a road map that builds in scalability, availability, security, great query performance and cost effectiveness. Minfy designs DWHs to your specific data storage needs and helps in integrating disparate data for insights, analysis and actions.
